Connect using Info

- Code snippets — Use when connecting through SDK, APIs, or third-party tools including agents.
- CloudShell — Use for a quick access to AWS CLI that launches directly from the AWS Management Console.
- Endpoints — Use when connecting through any IDE interface.

Internet access gateway: Disabled

IAM Authentication: Disabled

Programming language: MySQL (macOS)

Endpoint type: Instance endpoint

Connection steps

Follow the steps below to paste the code of each step in your tool and run the commands. The snippets dynamically reflect the authentication configuration.

```
mysql -h db-baldo542.czckyeam1g9k.us-east-1.rds.amazonaws.com -P 3306 -u admin -p'<Enter_DB_Password>' --ssl-verify-server-cert  --ssl-ca=/certs/global-bundle.pem mysql
```

Connected compute resources (0) Info

Actions

Connections to compute resources that were created automatically by RDS are shown here. Connections to compute resources that were created manually aren't shown.

Filter by compute resources

Resource identifier	Resource type	Availability Zone	VPC security group	Compute resource security group	Connected proxy

No connected compute resources

No connected compute resources that were created automatically to display.
